

Best Practice: To create awareness to students and faculty on the importance of 9 auspicious plants and their medicinal values.

Objective

To make stakeholders understand the high potential value of medicinal plants in treating various diseases.

Context

Lecturers are instructed to procure these nine plants wherever possible and donate them to NSS unit thus enabling them to plant in college, water them and safeguard plants.

Practice

During leisure hours the lecturers visit botanical garden along with their students and show them plans and explain their importance in treating various diseases.

Evidence of success

Students spread the news far and near and started planting them in their villages too. Along with allopathy medicines they started using these medicinal plants which do not have any side effects unlike allopathy medicines.

Problems encountered

Save plants from herbivorous animals. Use these plants under strict supervision of experienced people.

Dr. M. Revathi, Lecturer in English donating NAVA GRAHA plants to NSS units.
